ACAD 2000/LT QUALITY CONTROL

1. **Associative** dimensions will provide quick results and:

- Verify design accuracy before serious costs are incurred.
- communicate size accurately to others who work with the dwg.
- adjust **accurately and immediately** when you "STRETCH" or "SCALE".

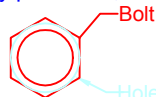

2. **ATTRIBUTES** attached to **BLOCKS** will:

- prompt users for proper, timely design *decisions* when a "BLOCK" is "INSERTED".
- ensure *completeness & accuracy* when extracted to lists, sorted and fully proofread, .

3. "**LAYER**"s allow checking of 2D or 3D models for:

- Fit between two mechanical parts.
- Alignment of first and second floor bearing walls.
- Interference between a shaft and hole.

Does it fit tight?

4. **LAYWALK** routine from R14 Express tools allows for fast layer confirmation.

5. 3D solid modeling provides interference checking.

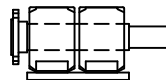

6. 3D surface or solid modeling provides visual checking and inspecting.

7. Use "**SPELL**" checking to find and fix typing and spelling errors.

8. "**BLOCK**"s drawn correctly once always "**INSERT**" accurately.

"IMAGE"s

communicate, replace
models!!

**Accurate BLOCKS
remain accurate.**
